

Practical 5: Registration Form with Frontend Validation and User-Friendly Error Handling

Problem Definition: Create a student registration form with HTML5 input types and JavaScript validation for name, email, mobile number, password, confirm password, course, year, gender, and terms acceptance. Use Regular Expression for validations.

Key Questions:

1. Are correct input types and attributes used?

Answer:

Yes. Appropriate HTML input types such as text, email, password, number, and date are used based on the required data. Attributes like required, placeholder, maxlength, min, max, and pattern are applied where necessary to improve validation, enhance user experience, and ensure accurate data entry.

2. Are validation errors displayed near the relevant fields?

Answer:

Yes. Validation errors are displayed directly below or beside the corresponding input fields, making it easy for users to identify and correct mistakes.

- Error messages clearly describe the issue.
- Messages appear immediately after validation fails.
- Errors are removed automatically once the user enters valid data.
- This approach improves usability and reduces user confusion.

3. Is password strength checked?

Answer:

Yes. Password strength is checked to encourage users to create secure passwords.

- The password is validated based on criteria such as minimum length.
- It checks for uppercase letters, lowercase letters, numbers, and special characters.
- Users receive feedback if the password is weak or does not meet the required criteria.
- This improves account security and encourages stronger passwords.

4. Is the form accessible using keyboard and screen-reader-friendly labels?

Answer:

Yes. The form is designed with accessibility in mind.

- Every input field has a properly associated <label> element.
- Users can navigate through the form using the **Tab** key.
- Buttons, checkboxes, and form controls are keyboard accessible.
- Screen readers can correctly identify labels and input fields.
- The form follows accessibility best practices, making it usable for a wider range of users, including those who rely on assistive technologies.
